Template for IPE Presentations

Camille Lanuel

Université de Lorraine, CNRS, Inria, LORIA, Nancy, France

How to use

1. Copy TEMPLATE.pdf and edit the copy in IPE;
2. Go in Edit > Document properties;
3. Edit the \name, \prestitle and \affil to your name, presentation title and affiliation. Leave \name and \prestitle empty if you do not want them to appear at the bottom of each page;
4. Add the packages and the macros that you need;
5. You can ungroup the text on the first page if you need to change how it is displayed;
6. Edit the date at the bottom of the page;
7. Now you can create your own presentation!

Note: The first package in the preamble is the font. You can also change it to your liking.
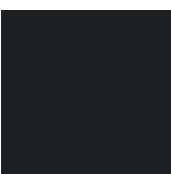

I made this template using the following guide:
https://olejorik.github.io/post/ipe_presentation_template/
Feel free to modify this template to suit your needs or to create your own!
